

AI SHARK TANK - PITCH REPORT

10/6/2026, 8:35:47 PM

Startup: FitBite

Funding ask: We are seeking Rs 50 lakh for 10% equity, valuing FitBite at Rs 5 crore.

PROBLEM: People want to eat healthier, but most struggle to decide **what to eat**, how much to eat, and how to fit healthy meals into their budget and busy lifestyle.

Existing diet plans are often generic, expensive, or difficult to follow because they don't consider individual preferences, dietary restrictions, fitness goals, and daily routines. FitBite addresses this gap by making personalized healthy eating **simple, affordable, and practical**.

SOLUTION: FitBite is an AI-powered personalized nutrition platform that creates practical meal and snack recommendations based on each user's **health goals, dietary preferences, allergies, budget, activity level, and daily routine**. Instead of providing generic diet plans, FitBite uses AI to generate affordable and easy-to-follow food suggestions, helping users make healthier choices without complicated meal planning.

REVENUE: FitBite will use a multi-stream revenue model: 1. **Premium Subscriptions:** Users can access advanced AI meal plans, personalized nutrition tracking, grocery planning, and progress insights through a monthly or annual subscription. 2. **Partner Commissions:** FitBite will earn commissions by partnering with healthy food providers, meal-prep services, grocery platforms, and fitness businesses. 3. **Corporate Wellness Plans:** Companies can purchase FitBite wellness subscriptions for their employees as part of employee health and wellness programs. 4. **Premium Add-ons:** Users can purchase specialized meal plans, such as high-protein, weight-management, vegetarian, or budget-focused plans. This combination creates recurring subscription revenue while allowing FitBite to scale through partnerships and B2B customers.

AUDIENCE: FitBite primarily targets **health-conscious students and young working professionals aged 18-35** who want to eat healthier but struggle with meal planning, limited time, budget constraints, or lack of personalized nutrition guidance. Secondary audiences include **fitness enthusiasts, busy parents, and people following specific dietary preferences** such as vegetarian, high-protein, or calorie-conscious diets. The initial focus will be on urban and digitally active consumers who are comfortable using AI-powered apps for everyday health and lifestyle decisions.

SCORECARD

Market Potential: 92/100

Innovation: 86/100

Business Model: 91/100

Execution: 84/100

Investment Worthiness: 92/100

OVERALL: 89/100

DECISION: INVEST

Valuation: Rs 4.55 Cr | Funding: Rs 50.0 Lakh | Terms: 11%

Reasoning: FitBite earns an offer: Market Potential (92/100) stands out, and the sharks believe the team can deliver. Funding of Rs 50.0 Lakh for 11% equity values the company

at Rs 4.55 Cr. Watch Execution (84/100) as you deploy capital.

Q&A TRANSCRIPT

[Venture Capitalist] How big can FitBite get? Walk me through the market size for FitBite primarily targets **health-conscious students and yo.

A: FitBite has the potential to become a large digital nutrition and wellness platform, starting with health-conscious students and young professionals in India.**TAM Total Addressable Market:**India's broader digital health market is already substantial and is projected to grow rapidly. More specifically, India's wellness-app market generated approximately **\$579 million in 2024** and is projected to reach **\$1.44 billion by 2030**, growing at 16.4% annually.**SAM Serviceable Available Market:**FitBite can initially focus on the nutrition and personalized-health segment. India's diet and nutrition apps market generated about **\$109 million in 2024** and is projected to reach **\$257 million by 2030**, with a 15.3% CAGR. India's personalized nutrition market was estimated at **\$213 million in 2025** and is projected to reach **\$289 million by 2030**.**SOM Serviceable Obtainable Market:**Our initial goal is to capture a small share of this growing market by targeting digitally active students and young professionals in major Indian cities. If FitBite eventually reaches **1 million paying users at an average of Rs 150 per month**, that would represent approximately **Rs 180 crore in annual subscription revenue**, before additional revenue from food partnerships and corporate wellness.India's young population provides a strong long-term customer base: people aged 10-24 represented about **26% of India's population in 2025**.Our long-term vision is to expand from personalized meal recommendations into a broader **AI-powered nutrition and wellness platform**, creating multiple revenue streams beyond subscriptions.We're not building just another diet app. We're starting with personalized nutrition for India's young, health-conscious population, then expanding into a complete AI-powered wellness platform. Even capturing a small share of India's growing nutrition and wellness-app markets can create a significant business.

[Founder] What will you ship in the next 90 days, and who does the work?

A: Over the next 90 days, we will launch and validate the first working version of FitBite.**Days 1-30 Build the MVP*** Launch the core FitBite web/mobile experience.* Build user onboarding for goals, dietary preferences, allergies, budget, and lifestyle.* Develop the AI-powered personalized meal recommendation engine.* Create an initial database of meals and nutritional information.**Days 31-60 Beta Launch*** Launch a beta version to approximately 200-500 users.* Track engagement, meal-plan usage, retention, and user feedback.* Improve recommendation quality based on real user behavior.* Add grocery planning and basic progress tracking.**Days 61-90 Validate & Grow*** Expand the beta to approximately 1,000 users.* Test the premium subscription model.* Begin partnerships with healthy food and grocery providers.* Measure conversion, retention, and customer acquisition costs.* Use the results to prepare for a larger public launch.**Who does the work:**The founding team will lead product development, AI/model integration, user research, and growth. We will use a small number of contractors or specialists where necessary for nutrition validation, UI/UX, and legal/compliance requirements.At the end of 90 days, our goal is to have a **working product, real users, measurable engagement data, and early evidence of willingness to pay**.

[Customer] I'm part of "FitBite primarily targets **health-conscious students and yo".

Why would I switch from what I use today to FitBite?

A: Today, people rely on generic diet plans, social-media advice, calorie-tracking apps,

or expensive nutrition consultations. The problem is that these options often require significant time, effort, or money and don't fully adapt to a person's daily lifestyle. Customers would switch to FitBite because it gives them **personalized, practical recommendations in seconds**. FitBite considers their goals, food preferences, dietary restrictions, budget, activity level, and available time to create recommendations they can realistically follow. As their goals and habits change, FitBite continuously adapts their plan. The key value proposition is simple: **instead of telling users what a healthy diet looks like, FitBite tells them what healthy choice makes sense for them today.**

[Angel Investor] How exactly do you make money price, margin, break-even point?

A: FitBite will use a freemium model. **Pricing** Free plan: Basic meal recommendations* Premium: **Rs 149/month** Annual plan: **Rs 1,499/year** Corporate wellness plans: Starting at **Rs 50,000/year** for small organizations **Unit economics** Our initial target is an average customer acquisition cost (CAC) of around **Rs 300** and an average gross margin of approximately **80%**, because the core product is software and AI-driven recommendations rather than physical food delivery. At Rs 149/month, a premium customer generates approximately **Rs 1,788** in annual subscription revenue before churn, payment costs, and other expenses. We will focus heavily on retention and annual subscriptions to improve customer lifetime value. **Break-even** We estimate initial fixed operating costs of approximately **Rs 5 lakh/month** for the product, infrastructure, marketing, and lean team. At an estimated contribution of roughly **Rs 120** per premium subscriber per month, FitBite would need approximately **4,200** active premium subscribers to reach monthly operating break-even. As the user base grows, we expect software economics and annual subscriptions to improve operating leverage.

[Venture Capitalist] What's your path to 10x scale, and what stops a big player from copying you?

A: Our path to 10x scale is to expand FitBite from a personalized nutrition app into a broader AI-powered wellness platform. **First**, we scale the core product from students and young professionals to families, fitness users, and corporate wellness programs. We can expand through campus partnerships, fitness communities, influencers, and employer wellness programs rather than relying only on paid advertising. **Second**, we expand geographically. Once the model is validated in India, FitBite can adapt meal recommendations to different cuisines, budgets, and dietary preferences across other markets. **Third**, we build additional revenue streams through premium subscriptions, corporate wellness, grocery and healthy-food partnerships, and personalized nutrition services. A large company could copy individual features, but our advantage comes from the combination of **personalized user data, recommendation quality, user feedback loops, localized nutrition knowledge, and a trusted ecosystem of food and wellness partners**. The more users interact with FitBite, the better we can understand what recommendations are practical and effective for different lifestyles. Our goal is to make FitBite difficult to replace, not simply difficult to copy.

[Founder] What's the biggest execution risk for FitBite and how will you handle it?

A: Our biggest execution risk is **user retention and trust**. Many people try health and diet apps but stop using them when recommendations feel generic, unrealistic, or difficult to follow. We will address this by launching with a focused target audience and continuously learning from user feedback. Instead of overwhelming users with complicated diet plans, FitBite will provide simple, affordable recommendations that fit their

actual lifestyle. We will track key metrics such as **weekly active users**, plan completion, retention, subscription conversion, and customer feedback. We will use these insights to continuously improve our recommendation engine and product experience. We will also work with qualified nutrition professionals to review our nutrition content and clearly position FitBite as a **nutrition-support tool**, not a replacement for professional medical advice. Our approach is to validate retention with a small user base first, then scale only after we see strong evidence that users are getting value and coming back.

[Customer] Tell me about the last real person who felt this problem. What did they do?

A: The last person we spoke to who experienced this problem was a young college student living away from home. She wanted to eat healthier but had a limited budget, a busy class schedule, and very little time or ability to cook. Her current solution was mostly to **eat whatever was available near college or order food online**, while occasionally searching Instagram and YouTube for healthy-diet advice. The problem was that these options were either convenient but unhealthy, or healthy but difficult to plan and maintain consistently. This isn't an isolated problem. Recent research involving 68 young adults across eight Indian cities found that young people identified **cost, easy availability of unhealthy food, limited cooking time, independent living, and peer influence** as major barriers to healthy eating. That's the gap FitBite is designed to solve: instead of asking a busy student to figure out nutrition on their own, FitBite gives them **a practical, personalized, and budget-conscious choice for what to eat today**.

[Angel Investor] You're asking We are seeking Rs 50 lakh for 10% equity, valuing FitBite at Rs 5 crore.. What does it fund, and how do I get my money back?

A: We are raising **Rs 50 lakh for 10% equity** to move FitBite from MVP validation to an early scalable business. **Use of funds:** **Rs 18 lakh** Product & AI: **app development, AI infrastructure, recommendation engine, and security.** **Rs 12 lakh** Customer acquisition: **campus marketing, digital campaigns, and user acquisition.** **Rs 8 lakh** Team: **product, engineering, growth, and nutrition expertise.** **Rs 7 lakh** Partnerships & operations: **food/grocery partnerships, nutrition content, and operational costs.** **Rs 5 lakh** Legal, compliance & contingency. **The investor gets 10% ownership in FitBite**, so their return comes from the value of that equity rather than a guaranteed repayment. Our goal is to use this capital to reach strong product-market fit, grow our paying user base, establish recurring subscription revenue, and build strategic partnerships. If FitBite grows significantly, the investor's 10% stake becomes more valuable. A future acquisition, secondary sale, or larger funding round could provide a potential liquidity event. For example, if FitBite eventually reaches a **Rs 50 crore valuation**, the investor's 10% stake would be worth approximately **Rs 5 crore**, subject to future dilution and the actual valuation at that time.
