

# AI CAREER ROADMAP

PERSONALIZED

Student → Software / AI Internship | Target Timeline: 3 Months

## CURRENT POSITION

**Status:** Student

**Core Skills:** Python, Web Development

**Stage:** Foundational skills in place; needs applied portfolio, interview readiness & professional visibility.

## TARGET GOAL

**Objective:** Land an Internship

**Timeline:** 3 Months (Sprint Mode)

**Target Roles:** Software Dev Intern, Web Dev Intern, Python/Backend Intern, Junior AI/ML Intern

## SKILL GAP ANALYSIS

| Skill Area                   | Current Level   | Needed For Internship               | Priority |
|------------------------------|-----------------|-------------------------------------|----------|
| Python Programming           | Good foundation | DSA + OOP + scripting fluency       | High     |
| Web Development              | Good foundation | Full-stack project + deployment     | High     |
| Data Structures & Algorithms | Weak/Unknown    | Needed for technical screens        | Critical |
| Git & GitHub                 | Basic/Unknown   | Version control for collaboration   | High     |
| Resume + LinkedIn Branding   | Not optimized   | Recruiter visibility & shortlisting | Critical |
| Interview Skills             | Untested        | Technical + HR round readiness      | High     |

## RECOMMENDED LEARNING PLAN

| Month   | Focus                                                                                   |
|---------|-----------------------------------------------------------------------------------------|
| Month 1 | DSA basics (arrays, strings, loops), Git/GitHub, revise Python OOP, HTML/CSS/JS refresh |
| Month 2 | Backend basics (Flask/Django or Node), REST APIs, databases (SQL), deploy 1 project     |
| Month 3 | Mock interviews, resume + LinkedIn polish, applications + referrals, DSA practice daily |

## SUGGESTED PROJECTS

- Full-Stack Web App** — auth, DB (CRUD), deployed live (e.g. task manager, expense tracker). Showcases web dev + backend.
- Python Automation/API Tool** — script or API that solves a real problem (e.g. web scraper, data pipeline, chatbot with an LLM API).
- Open-Source Contribution** — 2–3 merged PRs on GitHub to show collaboration and real-world code exposure.

## NETWORKING STRATEGY

- Optimize LinkedIn: headline, banner, featured projects, weekly posts on build progress
- Connect with alumni + recruiters at 5–10 target companies weekly
- Join dev communities (Discord, GitHub, Kaggle, r/cscareerquestions)
- Attend campus placement cell sessions, hackathons & career fairs
- Send personalized cold DMs/emails referencing shared projects

## MONTHLY MILESTONES

| Month | Milestone                                                        |
|-------|------------------------------------------------------------------|
| 1     | DSA fundamentals done; GitHub profile live; project #1 started   |
| 2     | 2 projects deployed; resume v1 ready; 10+ applications sent      |
| 3     | Mock interviews done; 30+ applications; internship offer secured |

## IMMEDIATE NEXT ACTIONS (THIS WEEK)

- Create/clean GitHub profile
- Pick 1 DSA course/sheet & start
- Draft resume v1 (use a template)
- Optimize LinkedIn headline + photo
